- ✓ SOS Emergency Assistance
- ✓ Fall Detection
- ✓ GPS Location
- ✓ Text-to-Locate
- ✓ Two-Way Voice
- ✓ Breakaway Lanyard
- ✓ Nationwide LTE Coverage

THE PROCESS

How ArmGuard Works

1

Press the SOS Button

Press the button on the ArmGuard Watch or Pendant when help is needed.

2

Connect to a Specialist

You're connected to a live, trained emergency response professional.

3

Notify Your Contacts

Designated family members or contacts can be notified and kept updated.

4

Coordinate Help

If needed, help is coordinated to the device's location while contacts stay informed until the event is closed.

Text-to-Locate

Approved contacts can request the user's location by text. ArmGuard replies with a map link, so family members know where their loved one is when it matters most.

Fall Detection

If a fall is detected and the user is unable to respond, ArmGuard can begin the emergency response process and notify designated contacts automatically.

Fall detection is an added safety feature and may not detect every fall.

FREQUENTLY ASKED QUESTIONS

+ Is ArmGuard a medical device?

No. ArmGuard is a personal safety solution, not a medical device.

+ Does ArmGuard work nationwide?

Yes. ArmGuard works across the U.S. wherever LTE coverage is available.

+ How is ArmGuard different from other smartwatches?

Typical smartwatches send an alert and rely on your phone. ArmGuard has built-in cellular and connects you to live response specialists who keep your contacts informed.

+ What happens when I press the SOS button?

You're connected to a live, trained professional who helps coordinate the appropriate response.

+ Can my family be notified?

Yes. Designated contacts can receive updates and stay informed during an event.

+ Is this device water resistant?

Yes. ArmGuard devices are water resistant for everyday use, but should not be submerged.
